

## **BRINGING ELECTRIC TILLERS TO MARKET WITH PERFORMANCE EQUIVALENT TO THAT OF PETROL TILLERS WAS A REAL CHALLENGE : MISSION ACCOMPLISHED AND SUCCESSFUL !**

*Pubert, a leader in the design and manufacture of tillers used worldwide, renowned for their reliability and durability, now offers two electric tillers with lithium-ion batteries in its range.*

With the Ecotill and Greentil tillers, create and maintain your vegetable garden in optimal performance conditions, silently, without fuel and without the maintenance worries of a thermal engine.

These battery-powered tillers are perfect for small to medium-sized gardens. Their lightweight design and easy handling make them accessible to everyone.

Powered by a 40V 4Ah battery, they offer a range of 15 to 20 minutes (the usage time depends on the terrain and the type of soil). Their teeth penetrate deep into the ground, reaching up to 24 cm or 29 cm, and work over a width of 46 cm or 55 cm depending on the model.

The height-adjustable handlebar ensures real comfort of use. These machines are easy to move thanks to their two forward speeds and reverse gear. The handlebar control allows for quick reversal of tine rotation, while the ergonomic control levers ensure simple, safe and effortless operation.

“ *Distribution networks have been waiting for several years for lithium battery-powered tillage equipment. Taking this step while maintaining the image of a manufacturer recognized for its high-performance and efficient machines was a real challenge. Seeing the satisfaction of all the specialists during their first field tests with the Ecotill and Greentil reassures us in our technological choices and promises a bright future for this new range of tillers.* ”

Gurwan LITSCHGY - Key Account Manager

Pubert battery-powered tillers can be used with accessories such as the rotary ridger or the dethatching kit, perfect for lawn maintenance.
